Subject: EMF Downgradient Data Summary Report and EMF-Plant II Groundwater
Investigation Work Plan

Dear Brian,

The EMF data summary report and draft work plan for downgradient sampling within the Plant II site are enclosed for your review.

The data report describes six phases of investigation work associated with the groundwater remediation project at the EMF site. The six phases of work were performed from May 1999 through September 2001 to investigate groundwater contaminant concentrations and geologic conditions downgradient of the EMF site. This work started at the EMF site, continued across Boeing Field, and ended at the North Boeing Field site at a location adjacent to East Marginal Way South.

The draft work plan has been prepared for continuing the groundwater investigation between the North Boeing Field site and the Duwamish Waterway, all within the Boeing Plant II property. As shown on Figure 5 of the draft work plan, the first location planned for investigation (Investigation Area 1) is located in the parking lot to the east of the 2-40 building. The location specified as Investigation Area 2 may vary and additional investigation areas within the Plant II buildings may be added depending on the results of the Area 1 work.

Comments and changes from you, King County and Boeing peer review consultants will be incorporated into the final work plan. As you know, the Plant II property is currently under RCRA Corrective Action. Prior to performing this work, we would like to get written concurrence from Ecology for performing the work under the Voluntary Cleanup Program.
